## CAMERA OBSCURA

"Pinhole image"

"The natural optical phenomenon that occurs when an image of a scene at the other side of a screen (or for instance a wall) is projected through a small hole in that screen as a reversed and inverted image (left to right and upside down) on a surface opposite to the opening"

## CAMERA OBSCURA

"Pinhole image"

"Several years ago, in order to push the visual potential of this process, I began to use color film and positioned a lens over the hole in the window plastic in order to add to the overall sharpness and brightness of the incoming image. Now, I often use a prism to make the projection come in right side up."

-Abelardo Morell

## LAYERED ACRYLIC

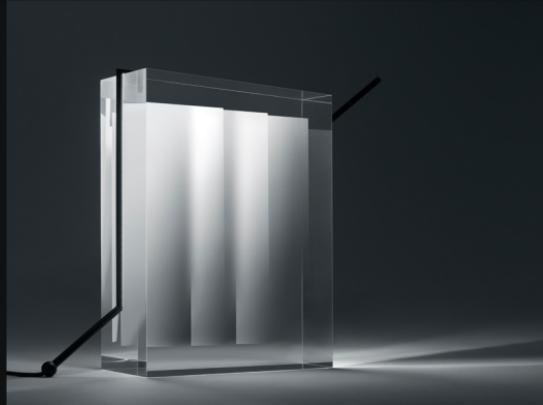

*Mario D. Fischer, Royal Rumble—Acrylic*

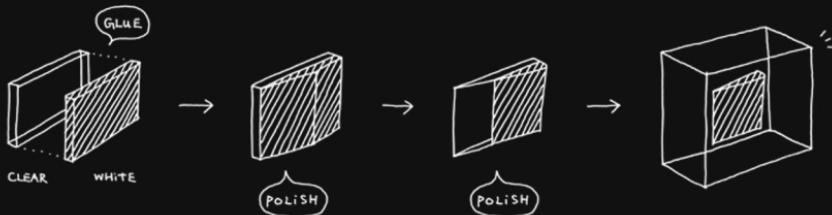

Uses thin transparent acrylic  
sheets stacked in succession

Gives illusion of depth
